SUMMARY

Computer Engineering student with hands-on software development experience in building mobile applications, backend REST APIs, databases and real-time data systems. Demonstrated expertise in Flutter, Django REST Framework, WebSockets, and Server-Sent Events through dynamic project implementations. Experienced in AI integration (Gemini API, RAG) and agile team collaboration.

WORK EXPERIENCE

Routin Teknoloji - Software Development Intern 07/2026 – 08/2026
• Developed and deployed backend REST APIs and Flutter frontend features for full-stack applications, supporting end-to-end user workflows.
• Refactored a reservation engine from HTTP polling to Server-Sent Events (SSE), reducing server network overhead by ~35% and enabling real-time updates.
• Coordinated task distribution and API contracts for a 5-person engineering team to implement WebSocket chat features and presence tracking.
• Processed and cleaned a dataset of 15,000+ customer feedback records to evaluate RAG pipeline performance and contextual retrieval accuracy.

PROJECTS

Real-Time Chat Application| Flutter, Django, WebSocket
• Coordinated a 5-person team to build a scalable chat app, defining API contracts and Git workflows to accelerate delivery.
• Engineered user-specific read receipts and online presence tracking over WebSockets with under 150ms message latency.

Real-Time Reservation Engine | Django REST, SSE, MySQL, Render
• Architected a persistent SSE communication layer replacing periodic polling, lowering HTTP request volume significantly.
• Integrated CRUD endpoints, automated database migrations, keep-alive ping mechanisms, and deployed the live service to Render.

AI Support & RAG Pipeline | Python, RAG, Embeddings, LLM API
• Processed 15,000+ customer feedback records using text cleaning and semantic similarity to optimize prompt context.
• Implemented intent-based query tagging in a RAG pipeline to improve query-to-context relevance.

AI CV Analysis Application | Flutter, Django REST, Gemini API
• Built a full-stack mobile app that parses CV documents into structured JSON and evaluates job alignment in an average of 5 seconds using Gemini AI.
• Designed automated resume-rebuilding workflows supporting multiple customizable templates and color themes to streamline profile optimization.

ÇumraAlSat - Android Marketplace Application | Java, Android Studio, WebView
• Converted an existing web marketplace into an Android app using WebView within a 2-person remote development team.
• Managed end-to-end testing and successfully published the application to the Google Play Store, reaching active users.

EDUCATION

Bachelor of Computer Engineering (English) (Ongoing) 08/2022 – 06/2027 (expected)
Biruni University
GPA: 3,58 / 4,00

SKILLS

Languages: Python, Dart, Java, C#, SQL, JavaScript
Frameworks & Web Technologies: Flutter, Django REST Framework, React, HTML, CSS
APIs & Protocols: REST APIs, WebSockets, Server-Sent Events (SSE), JWT
Databases & Tools: MySQL, Git, GitHub, RAG

CERTIFICATIONS

Participation Certificate – FUTURE'24 — Industrial Engineering Club, IKU
Participation Certificate – Women In Engineering Career Summit
Participation Certificate – Synergy Science'26: Cyber Security
TEI – TUSAŞ Engine Training Program

LANGUAGES

Turkish — Native, **English** — B1 - Intermediate
